

Abstract

Each of a plurality of masonry article comprises a
contoured first header, a contoured second header, a contoured
5 front face, a back face, a contoured lower base and an upper
base. The plurality of masonry articles has a plurality of
holes extending from the lower base to the upper base. The
contoured first header couples to the contoured second header
of another plurality of masonry articles and the contoured
10 lower base couples to the upper base of the other plurality of
masonry articles so that an outward face of a portion of a
wall assembled with the plurality of masonry articles has a
mortar-like vertically oriented gap and a mortar-like
horizontally oriented gap. A plurality of corner masonry
15 article and plurality of alternative corner masonry articles
similar to the plurality of masonry articles permit assembly
of a portion of a corner section of the wall.
